

LitBridge

An AI Literature Assistant for
the Overwhelmed Student

LitBridge. Your own AI bridge between papers and ideas.

A literature management tool that organises, prioritises, and creates a realistic next step for student research.

Qian Cui, Tianliang Zhang, Zhongshu Yang, Andy Huang

The Problem

Students already have papers, but they still struggle to turn them into progress.

Too many PDFs. Too little time. No clear next step.

- Research materials are scattered across folders, tabs, and notes.
- Students do not know which paper best supports a specific argument.
- Adding citations to an existing draft is slow and frustrating, especially for reviews and academic writing.
- Under deadline pressure, literature review becomes a bottleneck instead of a support system.

LitBridge turns a messy literature library into a focused academic workflow.

What LitBridge Does

Given a literature library and a target, LitBridge finds the most relevant content and organises it for action.

Why it matches the challenge

LitBridge helps overwhelmed students organise information, prioritise relevant evidence, and create a realistic next step for writing or research exploration.

Feature 1 · Literature → Existing Draft

Automatically suggest where citations should be inserted.

- The student already has a draft in progress.
- LitBridge analyses paragraph meaning and matches it to the strongest supporting papers in the library.
- The system suggests exactly where a citation belongs and explains why the paper is relevant.
- This reduces citation hunting and makes literature reviews much easier to complete.

Typical Output

Suggested citation placements, ranked evidence, relevance explanation, and a faster revision workflow.

The screenshot displays the LitBridge interface. At the top, a header bar contains the LitBridge logo, a 'Deploy' button, and a 'New analysis' button. Below the header, a status bar indicates the current document is 'LLM-based Autonomous Agents: A Survey (sample)' with 5 paragraphs, and a link to 'click a draft paragraph to inspect its matched source'. The main interface is divided into three columns. The left column, titled 'Library', lists various papers with their titles, authors, and chunk counts. The middle column, titled 'Inner Monologue: Embodied Reasoning through LM Planning', shows a selected paper by Huang et al. (2022) with 9 chunks. It displays 'Citation evidence · relevance 75%' and a 'Why' section explaining the relevance. Below this, there are three buttons labeled '#1 · 75%', '#2 · 50%', and '#3 · 40%', and a large red button labeled 'Insert this citation'. The right column, titled 'LLM-based Autonomous Agents: A Survey (sample)', shows a draft paragraph being analyzed. It contains a blue box with a '3 suggestions' button and a green box with a '2 suggestions' button. The bottom of the interface shows a 'Product view: matching draft paragraphs to the most relevant citations'.

Feature 2 · Literature → New Topic

Retrieve, read, and summarise evidence for a research question.

- The student begins with a topic or research question instead of a finished draft.
- LitBridge searches the library, retrieves the best sources, and reads them for supporting evidence.
- It returns a concise summary with relevant claims, supporting content, and traceable sources.
- This helps students move from a vague idea to a focused evidence-backed direction.

Typical Output

An evidence summary, supporting arguments, and a clearer starting point for writing.

Why It Helps the Overwhelmed Student

LitBridge is designed to reduce cognitive load and increase momentum.

Organise

Turn a large, messy literature library into structured information that is easier to navigate and use.

Prioritise

Bring the most relevant papers and strongest evidence to the top, instead of forcing students to search manually.

Create a realistic next step

Help students move directly into citation insertion, evidence-backed drafting, or topic development.

Not just a chatbot

Focused academic workflow

Grounded in the user's library

Uses the student's own sources

Explainable relevance

Shows why a paper fits

Useful in two stages

Drafting and topic exploration

Less searching. Less guesswork. More writing.
